## RULES

## ITEM 110-A

## DEFINITIONS AND EXPLANATIONS OF TERMS, PUNCTUATION AND REFERENCES

The following definitions will apply when such terms are used in this Classification or in tariffs governed by this Classification. When different definitions are provided for the same terms in connection with rates, classes, rules or other provisions, such definitions will take precedence.

**Sec. 1. 'Carrier,' 'Consignee,' 'Consignor' or 'Shipper'** includes the authorized representatives or agents of such 'carrier,' 'consignee,' 'consignor' or 'shipper.'

**Sec. 2. 'Truck' or 'Vehicle'** means any vehicle or vehicles propelled or drawn by a power unit and used on highways in the transportation of property.

**Sec. 3. (a) 'Point'** means a particular city, town, village, community or other area which is treated as a unit for the application of rates.

**Sec. 3. (b) 'Place'** means a particular street address or other designation of a factory, store, warehouse, place of business, private residence, construction location or the like, at a point.

**Sec. 3. (c) 'Site'** means a particular platform or specific location for loading or unloading at a place.

**Sec. 3. (d) 'Address'** means a particular street address (not a U.S. Post Office Box Number) where street address is available and must include the Post Office ZIP Code.

**Sec. 4. Explanation of the words 'Rate' and 'Class':**

**Sec. 4. (a) 'Rate'** means the figure stated in cents, dollars and cents, or fractions thereof, to be used in computing the charge on property transported.

**Sec. 4. (b) 'Class'** means the number assigned to an article or group of articles in this Classification or in exceptions thereto, for the purpose of determining the applicable rate.

**Sec. 5.** Unless otherwise provided in carriers' tariffs, a '**shipment**' consists of a tender of freight to a carrier by a consignor at one place at one time for delivery to a consignee at one place at one time on one bill of lading.

**Sec. 5. (a) A 'prepaid shipment'** is one on which the charges for transportation service rendered at the request of the consignor, including charges for any accessorial services performed at the request of the consignor, are to be paid by the consignor.

**Sec. 5. (b) A 'collect shipment'** is one on which the charges for transportation service, including accessorial services rendered at the request of the consignee, or requested by the consignor for the consignee, are to be paid for by the consignee.

**Sec. 6.** Unless otherwise provided, the term '**Handling Unit**' or '**Shipping Unit**' refers to each piece or unit of freight tendered to the carrier for shipment that requires or promotes separate handling. Such piece or unit may consist of a loose article, an article or articles in a package, or an article or articles palletized or unitized for shipment in such a manner as to allow loading and unloading as a single piece or unit. Unitization includes, but is not limited to, the consolidation of individual packages or pieces by means of banding, strapping, wrapping or master packing, with or without lift truck skids or pallets. Where articles are unitized for shipment, the term 'handling unit' or 'shipping unit' does not refer to the individual packages or pieces so unitized, but rather to the complete unit as tendered.

**Sec. 7. Explanation of the words 'and' and 'or' and the use of Parentheses:**

**Sec. 7. (a) 'And'** is used to couple the terms between which it appears.

**Sec. 7. (b) 'Or'** provides for alternation or use of either or both of the terms between which it appears.

**Sec. 7. (c)** As used in the description of articles, the term appearing between **parentheses** constitutes another description of the identical article immediately preceding the parentheses.

**Sec. 8. 'Density.'** Where classes are based on the density of articles as tendered for shipment, the word 'density' refers to the actual density of the articles shipped, as measured in pounds per cubic foot.

**Sec. 8. (a)** To determine the density of a handling unit, first determine the cubage of the handling unit by multiplying the greatest straight-line dimensions of length, width and height (depth) in inches, including all projections, if any, as tendered to the carrier for shipment, and dividing the total by 1,728 cubic inches (one cubic foot). The density is the result of the division of the weight of the handling unit as tendered for shipment by the cubic feet. For instance, the density of a handling unit consisting of boxes unitized on a lift truck pallet measuring 48" x 40" x 45" and weighing 450 pounds is determined as follows: 48" x 40" x 45" = 86,400 cubic inches; 86,400 ÷ 1,728 = 50 cubic feet; 450 lbs. ÷ 50 = 9.00 pounds per cubic foot (pcf).

**Sec. 8. (b)** To determine the density of a cylindrical-shaped handling unit, square the greatest dimension on the cylindrical plane by multiplying the dimension by itself in inches and then multiplying that result by the height or length. Divide the result by 1,728 cubic inches. The density is the result of the division of the weight of the handling unit by the cubic feet.

**Sec. 8. (c)** Where articles are unitized on lift truck pallets, platforms, racks or skids, the pallet, platform, rack or skid constitutes an integral part of the handling unit, and except as provided in Item 640, Sec. 3 (b), must be included in the computation of density.

**Sec. 8. (d)** Unless otherwise provided, where a shipment consists of multiple handling units the density shall be calculated on each handling unit, except that where shipping papers show only a total weight for all handling units tendered the density may be calculated by using the total weight and the total cube.

**Sec. 9. Indentations:** Where any part of the description of an article is found set away from the left margin in a position subordinate to the text preceding it, the description is to be read with its context and particularly with the preceding text, heading or headings. The effect of its position upon the meaning of a description should be carefully observed. Example: Item ▲114000, 'Machinery Group,' controls items ▲114026 through ▲133320. Item ▲124005, 'Agitators, washing machine, plastic,' being further indented, is governed by the description just above it in item ▲124000, 'Laundry.'

**Sec. 10.** Unless otherwise provided, where individual items designate an article as being '**enameled**,' the term means porcelain or vitreous enamel.

**Sec. 11.** The terms '**in the rough**,' '**rough turned**,' '**in the white**' and '**finished**,' as defined in this rule are used to describe articles constructed of wood.

**Sec. 11. (a) 'In the rough' or 'rough turned'** means that the articles are not further manufactured than sawed, hewn, planed, bent or turned.

**Sec. 11. (b) 'In the white'** means that the articles are further manufactured than as provided for in Sec. 11(a), but including not more than one coat of priming.

**Sec. 11. (c) 'Finished'** means that the articles are further manufactured than as provided for in Sec. 11(b).

**Sec. 12.** Definitions of, or meaning for, various forms of shipment:

**Sec. 12. (a) 'SU' (Set Up)** means articles in their assembled condition or articles that are tendered for shipment disassembled, folded or telescoped but do not meet the conditions described in Sec. 12, paragraphs (b) through (d). Where an article does meet the conditions described in Sec. 12, paragraphs (b) through (d), but such provisions are not published in the applicable item description, the SU class will apply.

**Sec. 12. (b) 'SU in sections' or 'In SU Sections'** means articles taken apart in sections regardless of bulk or cubage, except that where other forms of shipment are provided in the same item and the meaning for such forms of shipment as described in Sec. 12, paragraphs (c) or (d) is complied with, the classes for such other forms of shipment will apply.

**Sec. 12. (c) 'KD' (Knocked Down)** means that an article must be taken apart, folded or telescoped in such a manner as to reduce its bulk at least 33<sup>1</sup>/<sub>3</sub> percent from its normal shipping cubage when set up or assembled.

(Continued on following page)

**RULES**

**ITEM 110-A-Continued**

**Sec. 12. (d) 'KD flat'** means that an article must be taken apart, folded or telescoped in such a manner as to reduce its bulk at least 66<sup>2</sup>/<sub>3</sub> percent from its normal shipping cubage when set up or assembled.

**Sec. 12. (e) 'Folded'** means that the article is folded without regard to reduction of shipping cubage.

**Sec. 13. (a) 'Nested'** means that three or more different sizes of an article must be placed each smaller within the next larger or that three or more of the same articles must be placed one within the other so that each upper article must not project above the next lower article by more than one-third of its height.

**Sec. 13. (b) 'Nested solid'** means that three or more of the same articles must be placed one within or upon the other so that the outer side surfaces of the one above will be in contact with the inner surfaces of the one below and so that each upper article will not project above the next lower article by more than 1/4 inch.

**Sec. 13. (c)** Classes provided for 'nested' articles **will not apply** when articles of different name or material are nested or placed one within the other, regardless of whether they are grouped in one description or shown separately.

**Sec. 14. 'Iron'** as used in the description of an article includes **'Steel'** and vice versa, and unless otherwise specified, these terms also include **'Stainless Steel'** or **'Alloy Steels'** containing less than 50 percent nonferrous metals.

**Sec. 15.** Unless otherwise specifically provided:

**Sec. 15. (a)** The word **'rubber'** refers to natural or synthetic rubber or rubber compounds and does not apply on articles made of plastic.

**Sec. 15. (b)** The word **'foam'** used in conjunction with **'rubber'** or the words **'foam rubber'** refers to cellular rubber produced by the introduction of gas or air into latex and vulcanizing and does not apply on articles made of foam or expanded plastic.

**Sec. 15. (c)** The word **'sponge'** used in conjunction with **'rubber'** or the words **'sponge rubber'** refers to cellular rubber produced by the introduction of gas or air into nonliquid rubber and vulcanizing and does not apply on articles made of expanded plastic.

**Sec. 15. (d) 'plastic' or 'plastics'** refers to materials consisting of, or articles made from, synthetic gums or resins, cellulose derivatives, casein solids, coal tar or petroleum resins or rubber hydrochloride, with or without inert fillers, see Note, and whether or not reinforced or laminated with fibers, glass flakes or with macerated or sheet paper or fabric.

**Note**—The term **'fillers'** refers to organic or inorganic materials in finely divided or fibrous form (ground, chopped or pulverized) used to produce desired physical, chemical or electrical properties of finished materials or articles. Examples of fillers are:

Alpha cellulose	Earths	Soybean meal
Asbestos	Glass fibers	Synthetic fibers
Carbon black	Mica	Vegetable fibers
Cotton flock	Nut shell flour	Wood flour

**Sec. 15. (e)** The following phrases refer to the product produced by gelatinizing cellulosic paper with a chemical solution. The phrases do not apply nor refer to materials or articles of plastic and fiber construction:

Chemically hardened fiber	Indurated fiberware
Chemically hardened fiberware	Indurated paper
Chemically hardened paper	Indurated pulpboard
Chemically hardened pulpboard	Vulcanized fiber
Indurated fiber	Vulcanized fiberware

**Sec. 16.** Not currently used.

**Sec. 17.** Where in the separate descriptions of articles the words **'fiberboard,' 'pulpboard'** or **'paperboard'** are used, they are interchangeable and whenever any is used all are included.

**Sec. 18.** Unless otherwise provided, the word **'interlaced'** means that three or more of the same size article must be packed in such a manner as to reduce the package cubage (outside dimensions) at least 33<sup>1</sup>/<sub>3</sub> percent from the package cubage (outside dimensions) required for the same number of articles not interlaced.

**Sec. 19.** Explanation of **'blister packed,' 'skin packed'** and **'card mounted'**:

**Sec. 19. (a) 'Blister Packed'** means that the article is contained in a preformed, thermoformed plastic receptacle (blister) which is affixed to a fiberboard or paperboard card backing. The 'blister' may or may not be shaped to the contours of the article.

**Sec. 19. (b) 'Skin Packed'** means that the article is placed on a fiberboard or paperboard card and is covered by a thin, thermoformed plastic sheet, which is pulled tightly around the article, essentially conforming to the shape of the article and firmly securing the article to the card.

**Sec. 19. (c) 'Card Mounted'** means that the article is attached to a fiberboard or paperboard card backing by means of staples, tape, wire ties or other mechanical fastening methods.

**Sec. 20.** The terms **'Not taken'** or **'Not accepted'** mean that the described article or articles will not be accepted for shipment nor as premiums accompanying other articles.

**Sec. 21.** Unless otherwise provided, the term **'United Inches'** is defined as the sum of the length, width and height (depth) of the article as packaged for shipment.

**Sec. 22.** Unless otherwise provided, the provisions for **'Scrap'** will only apply on fragments, scraps or pieces of material that are useless for any purpose other than remelting or the reclamation of raw materials. Such provisions will not apply on articles shipped in their original form, including used articles or defective articles being returned to the manufacturer for credit.

**Sec. 23.** Unless otherwise provided, the term **'Greatest Dimension'** refers to the longest straight-line dimension of the handling unit as tendered for shipment.

**DEFINITION AND SPECIFICATIONS FOR PLASTIC SEMI-BULK BAGS**

Cancel; see Item 280.

## RULES

## ITEM 280-A

**DEFINITION OF OR SPECIFICATIONS FOR INTERMEDIATE BULK CONTAINERS (IBCs)****General Definition and Specifications**

**Sec. 1.** Intermediate Bulk Containers (IBCs) are large flexible, semi-rigid or rigid portable packages that permit handling with mechanical equipment and may be constructed from a variety of materials including fabric, fiberboard, metal, plastic or wood, or a combination thereof, see Secs. 2 and 3 herein. The receptacle of an IBC has a volumetric capacity of not more than 3,000 liters (793 gallons or 106 cubic feet) and not less than 450 liters (119 gallons or 15.9 cubic feet) or a maximum net mass of not less than 400 kilograms (882 pounds). They must be designed with handles, straps, legs, an integral lift truck skid, pallet or platform base, or be secured on a lift truck skid, pallet or platform so as to provide for mechanical equipment to safely pick up the container, and must be constructed so as to sufficiently contain and protect the contents and withstand the normal rigors of the less-than-truckload environment. IBCs intended for stacking must have an integral stacking alignment or securing design feature. IBCs must be securely closed, and sufficient outage must be left within the IBC to ensure that the package will not leak or be permanently distorted as a result of liquid expansion due to change in temperatures likely to be encountered during transportation. IBCs designed for the transport of solid materials must be sift-proof and water-resistant. Bottom valves must be secured in the closed position, have a secondary means of sealing and must sufficiently protect against damage (e.g. shearing).

**Flexible IBCs (FIBCs)**

**Sec. 2.** Flexible IBCs (FIBCs) may be used for dry commodities only and must be constructed as follows and meet the performance requirements specified herein. FIBCs must be made from coated or uncoated polyethylene or polypropylene woven fabric so constructed as to contain and protect the contents and withstand the normal rigors of the less-than-truckload environment. Handles or straps must harness, encircle or be securely attached to the FIBC body to facilitate handling by mechanical equipment. FIBCs with spouts for discharging purposes, or with top or bottom filling or discharging openings, must be secured by means that will provide a sift-proof closure. FIBCs on lift truck skids, pallets or platforms must be designed and secured so that container and contents will not overhang the lift truck skid, pallet or platform deck. FIBCs may be used again in transportation only when they are in such condition that they will protect contents as effectively as new containers.

**Nonhazardous Liquids in Fiberboard IBCs with Inner Plastic Film Bag or Liner**

**Sec. 3.** Nonhazardous liquids may be shipped in fiberboard IBCs having an inner plastic film bag or liner and secured on a lift truck skid, pallet or platform. Container must be six-sided and made of solid or of multiwall corrugated fiberboard sufficient to support the capacity of the inner plastic film bag or liner and its contents. Inner plastic film bag or liner must have sufficient outage to provide adequate containment during transport. Fiberboard container must not overhang the lift truck skid, pallet or platform deck and must be secured on the lift truck skid, pallet or platform by strapping in opposing directions, with at least two straps in each direction.

**Use for Hazardous Materials**

**Sec. 4.** IBCs used for the transportation of hazardous materials must be in conformance with the applicable requirements of Title 49 of the Code of Federal Regulations (CFR). ASTM D7387, Standard Test Method for Vibration Testing of Intermediate Bulk Containers (IBCs) Used for Shipping Liquid Hazardous Materials (Dangerous Goods), may be used to test the integrity of the IBC, providing the 49 CFR requirements have been met.

<p>◆60000-A</p> <p>60002-A</p>	<p><b>Drugs, Chemicals, Medicines and Other Articles Named</b> in items making reference to this item, value declared in writing by the shipper, or agreed upon in writing as the released value of the property, not exceeding \$3.35 per pound, see Notes, items 60002 and 60004, in packages provided in separate descriptions for articles.....</p> <p>NOTE—The value declared in writing by the shipper or agreed upon in writing as the released value of the property, as the case may be, must be entered on shipping order and bill of lading as follows: <i>'The agreed or declared value of the property is hereby specifically stated by the shipper to be not exceeding \$3.35 per pound for each distribution package.'</i></p> <p>Carrier's maximum liability in the event of loss or damage will be determined separately for each distribution package lost or damaged by multiplying the weight of such distribution package by \$3.35 per pound. In no case will carrier's liability exceed the actual value of the property lost or damaged.</p> <p>The term 'distribution package' means any primary shipping package authorized by the provisions of individual tariffs or classification items making reference to item 60000. When a number of distribution packages have been unitized, strapped or otherwise fastened together, or contained on pallets, platforms or skids, or have been overpacked in an additional complying package, the carrier's maximum liability will be determined by separately multiplying the released value times the weight of each individual distribution package lost or damaged and not on the basis of the weight of the total number of distribution packages unitized, strapped or otherwise fastened together or contained on pallets, platforms or skids, or overpacked in an additional complying package. Where a distribution package contains articles which have released value rates or ratings and articles which do not, the carrier's maximum liability is to be determined by multiplying the total weight of the distribution package by the released value.</p> <p>Subject to the condition that the released value stated by the shipper shall be void as an agreement limiting the carrier's or freight forwarder's liability unless supported by a consideration in the form of a reduced charge for transportation.</p> <p>(Classes herein based on released value have been authorized by the Interstate Commerce Commission in Released Rates Order No. 972 of November 26, 1979.)</p>	<p>70</p>
