

## Supply Chain Success Story!

# Providing a Smooth On-Ramp to TMS Success

## THE STORY

When the rubber hit the road, a leading off-highway tire manufacturer turned to Logistics Plus to help overhaul its transportation management strategy. The company sought a partner that could deliver a customized TMS platform with managed transportation support and robust audit and payment processes. Despite a few bumps along the way, the journey gained serious traction following a full integration with the client's enterprise resource planning (ERP) system.

## THE HIGHLIGHTS

- **Dedicated TMS Implementation:** Logistics Plus deployed a customized MyLogisticsPlus™ transportation management system (TMS) tailored to the client's mostly LTL and truckload freight shipping needs.
- **Global Control Tower:** A centralized logistics control tower was established to support and coordinate freight activities as an extension to the client's in-house team. An automated full truckload freight bidding system was also developed for the client.
- **Freight Audit & Payment Process:** LP implemented a robust freight audit and payment solution, ensuring invoices were accurate, compliant, and processed on time—leading to significant cost reductions.
- **Supply Chain Visibility:** LP helped integrate its TMS with customer's ERP to provide real-time visibility into shipments, allowing the client to process orders, track performance and respond proactively to potential disruptions.
- **Cost Savings & Efficiency:** With cleaner data and clearer insight, the client improved efficiency and carrier selection, gained control over logistics spend, and optimized overall transportation performance.
