

Supply Chain Success Story!

Refinery Relocation Export Success: Breakbulk Logistics from the U.S. to Indonesia

THE STORY

When a global energy infrastructure company needed to relocate 68 pieces of refinery equipment—totaling more than 4,400 cubic meters—from an active U.S. site to a project site in Surabaya, Indonesia, it turned to Logistics Plus. With the site still operating, coordination, safety, and timing were critical. The LP Kansas City project cargo team led a comprehensive solution that included surveys, inland transport, container procurement, breakbulk vessel chartering, and export compliance. The project delivered on schedule, with full regulatory alignment and client satisfaction.

THE HIGHLIGHTS

- **Breakbulk Export Planning:** LP conducted detailed cargo surveys, managed containerization, and prepared all equipment for export while the site remained operational.
- **Charter Vessel Coordination:** The team successfully coordinated a breakbulk vessel charter from Tampa to Surabaya, ensuring the most efficient and cost-effective route.
- **Export Documentation & Compliance:** All export documents, customs clearances, and insurance requirements were handled smoothly by the LP team.
- **Global Project Oversight:** The LP Kansas City team worked closely with port authorities, truckers, and destination agents to ensure seamless execution across touchpoints.

Creative Solutions for Unique Challenges.
