

Supply Chain Success Story!

Heavy Lift in Harsh Conditions: Delivering a Crawler Crane from Poland to France

THE STORY

When a major industrial customer needed to relocate a Liebherr LR-11350 crawler crane from Poland to France, they turned to [Logistics Plus Poland](#) for expert project logistics support.

The move involved transporting multiple oversized crane components across Europe, including units weighing more than 72 metric tons. Complicating matters, the operation took place during one of the coldest winters Poland has seen in decades, with overnight temperatures dropping to -25°C .

Despite the extreme conditions—which disrupted hydraulic systems on auxiliary cranes used during loading—the Logistics Plus team adapted quickly, relying on careful planning, specialized equipment, and precise coordination to complete the move safely and on schedule.

THE HIGHLIGHTS

- **Oversized & Heavy Cargo Handling:** The project involved transporting multiple components of a Liebherr LR-11350 crawler crane, with the heaviest units exceeding 72 metric tons.
- **Extreme Winter Conditions:** Operations took place during severe winter weather, with temperatures dropping to -25°C , affecting hydraulic systems and requiring adaptive handling procedures.
- **Specialized Transport Equipment:** Logistics Plus deployed multi-axle heavy haul trailers and specialized lifting equipment to safely handle the oversized crane components.
- **Precision Planning & Coordination:** The move required weeks of preparation, including route planning, load engineering, and cross-border coordination between Poland and France.
- **Safe & Successful Delivery:** Despite extreme weather and complex cargo parameters, the crane components were delivered safely and on schedule, demonstrating Logistics Plus' expertise in demanding heavy-lift transport operations.
