

Supply Chain Success Story!

Thailand Yacht Transport: Meticulous Planning Meets Seamless Execution

THE STORY

When a leading boat manufacturer in Thailand needed to safely extract, transport, and launch a large custom yacht from its inland production facility to a nearby river, they turned to [Logistics Plus Thailand](#) Yacht Transport Specialists.

With just 10 kilometers to cover—but countless complexities to overcome—the project required three weeks of intensive planning and flawless execution over a two-day operation window. From dual-crane lifts to nighttime hydraulic trailer transport, the LP Thailand team proved once again that execution is only as strong as the preparation behind it.

THE HIGHLIGHTS

- **3 Weeks of Preparation:** Technical teams conducted extensive route surveys and rigging assessments to plan for a seamless inland transit and on-site crane operations.
- **2-Day On-Site Execution:** Operations began with a dual-crane lift to extract the yacht from the factory. At 1:00 AM, a 13-axle hydraulic trailer transported the yacht 10 km to the launch site—strategically timed to avoid traffic and minimize public disruption.
- **Controlled Quay-Side Launch:** Two 100-ton cranes were used to carefully lower the yacht into the river. The team reinforced the quay with steel plates to disperse ground pressure and ensure a safe, stable lift.
- **Flawless Finish:** The entire project—from factory to floating—was executed without incident. Thanks to expert rigging, coordinated teamwork, and pre-planning, the yacht was successfully launched and delivered on schedule.
