

Supply Chain Success Story!

Global Coordination in Motion: Delivering a Tissue Machine from Europe to Chile

THE STORY

When a key customer required the transport of a sensitive, high-value tissue machine from Europe to Chile, they turned to Logistics Plus for a fully coordinated, end-to-end solution.

[Logistics Plus Chile](#) and [Logistics Plus Scandinavia](#) worked in close collaboration to manage this complex, multi-stage operation spanning international ocean freight, port handling, specialized container deconsolidation, and final inland delivery.

With tight timelines and cargo sensitivity at stake, Logistics Plus delivered the project seamlessly—demonstrating the power of global coordination backed by local expertise.

THE HIGHLIGHTS

- **End-to-End Global Execution:** The project included international ocean shipping, destination port operations, container deconsolidation, and final delivery to the customer's facility.
- **Specialized Flat Rack Handling:** The tissue machine was transported via flat rack containers, requiring careful planning and precision during deconsolidation and handling.
- **Sensitive, High-Value Cargo:** Due to the equipment's value and sensitivity, the operation required strict handling protocols and close supervision at every stage.
- **Cross-Regional Collaboration:** Seamless coordination between LP Chile and LP Scandinavia ensured alignment across origin, transit, and destination.
- **On-Time, Reliable Delivery:** Through detailed planning and execution, Logistics Plus delivered the cargo safely, efficiently, and within the required timeframe.
