

## Supply Chain Success Story!

# Scanning for Success: How New Technology Helped Pick Up the Pace

## THE STORY

When a leading manufacturer's warehouse operations started feeling more like a scavenger hunt than a streamlined supply chain, Logistics Plus (LP) decided it was time to "scan" for a smarter solution. Enter Zebra Technologies: with rugged mobile computers and lightning-fast scanners, LP transformed its pick-pack-ship process from error-susceptible to error-free.

The results were nothing short of barcode brilliance. Picking errors dropped by 70%, fulfillment speed soared, and inventory accuracy hit a high note. By implementing the new scanning tech, LP turned every warehouse worker into a data superhero—capturing inventory in real time, eliminating mispicks, and keeping orders humming along. With scalable solutions and instant visibility, LP now orchestrates warehouse operations with the precision of a well-tuned symphony.

## THE HIGHLIGHTS

- **Barcode Brilliance:** 70% fewer picking errors—mispicks dropped from ~30 to under 10 per 1,000 picks.
- **Real-Time Inventory:** Modern scanners and mobile computers deliver instant updates and order tracking.
- **Speedy Fulfillment:** Orders processed faster, supporting higher volumes and on-time delivery.
- **Scalable Tech:** Solutions easily expand to new sites and seasonal peaks.
- **Industry Applause:** Zebra Technologies recently featured LP as a model client example for warehouse modernization.
