

Supply Chain Success Story!

Silicon and Steel: Delivering Oversized Semiconductor Equipment Across Japan

THE STORY

When an equipment manufacturing client required the movement of oversized semiconductor equipment in custom steel frames, they selected [Logistics Plus Japan](#) to manage the shipment from arrival through final delivery. Due to the cargo's size, value, and specialized handling requirements, the project demanded precise coordination across customs clearance, transportation, and on-site delivery.

Leveraging its expertise in oversized and high-value cargo logistics, Logistics Plus Japan successfully managed the shipment, ensuring safe handling, protected transport, and on-time delivery within a tight project schedule.

THE HIGHLIGHTS

- **Specialized Semiconductor Logistics:** Managed the transport of oversized, high-value semiconductor equipment secured in custom steel frames.
- **Expert Customs Clearance:** Coordinated customs procedures for specialized cargo to ensure efficient processing and minimize delays.
- **Out-of-Gauge Transportation:** Arranged OOG trucking and handling solutions tailored to the dimensions and requirements of the equipment.
- **Cargo Protection:** Utilized sheet covering and careful handling procedures to protect sensitive equipment during transit.
- **Time-Critical Execution:** Delivered the shipment safely and on schedule despite tight project deadlines.
- **End-to-End Coordination:** Oversaw every stage of the move, from customs clearance through final delivery, providing a seamless logistics solution for the client.
